

# CUSTOM PRINTED CARTON SEALING TAPE

***Inexpensive way to advertise!  
Only adds pennies to package cost!***

***Eliminates the need for custom printed boxes***

***Reduces pilferage -  
Acts as a tamper-evident tool***

## VARIOUS GRADES AVAILABLE

**Choose the best tape for your needs from our selection of available products!**

**Acrylic CS tapes** are best for long-term adhesion and aging, ideal for warehouse storage, inventory and export cartons, offering a wide temperature performance, better UV resistance, but better for light to medium weight cartons.

**Hot Melt rubber CS tapes** provide high initial tack (quick stick) grabbing the box immediately. This provides faster application and packing efficiency. HM tapes also provide stronger holding power (shear strength) making it better for heavier cartons, overstuffed boxes and recycled corrugate.

**Water activated tapes (WAT)** are made with strong paper and reinforced fibers and a starch-based adhesive that forms a chemical bond to the carton (a weld). It is by far the strongest of the printed tape options - providing durability and tamper-evidence even without the print.

### **2.0 MIL ACRYLIC (Holds longer)**

Best for lightweight boxes and palletized load shipments (truck carrier); non-recycled boxes

### **2.0 MIL HOT MELT (Sticks faster & stronger)**

Best for moderate weight (up to 40 lbs.) and individualized shipments (UPS, FedEx); excellent for recycled corrugate

### **WAT (Security + Strength)**

Best for heavy duty weight (40+ lbs.) and individualized shipments or export (UPS, FedEx) of higher value goods; excellent tamper evident packaging ("welds" the corrugate together)
